### **WBC FUTURE MEETINGS**

2000	Punta Del Este, Uruguay
2002	Hannover, Germany

# Make every shot count!

with the **ONLY 11-way Pre-breeding Vaccine** available

## Open cows and abortions are an expensive waste of your bull's time!

**Vira Shield 5+VL5, the 11-way shot that counts.** As a cautious manager, you probably already vaccinate for Vibrio, Lepto, IBR, BVD, PI<sub>3</sub>, and BRSV, but are you using the safest and most complete product available? Unlike our competitors, Vira Shield 5+VL5 is totally killed and does not have the potential to cause disease like modified live vaccines, and is safe for pregnant cows. Vira Shield 5+VL5 contains Xtend III<sup>®</sup> and requires only one 5 ml dose with a booster of Vira Shield 5. Vira Shield

5+VL5 is the only 11-way prebreeding vaccine containing field strains from actual disease outbreaks. The entire Vira Shield line contains Type 1 and the new, devastating Type 2 BVD which is now causing abortions and weak calves all across the nation. Vira Shield is the first vaccine to contain **both Type 1 and Type 2 BVD.**

**Vira Shield 5+VL5 . . . the ONLY 5ml shot containing 11-way protection!**

**"Contains USDA Approved BVD Type 2, Strain TN131 since 1986".**

Grand Laboratories, Inc.  
Larchwood, IA

## Strong new medicine for beef and dairy.

New Excenel® Sterile Suspension is a powerful way to extend good medical practice to beef and dairy clients. Its zero milk withdrawal, broad spectrum and ready-to-use convenience make EXCENEL the superior injectable antibiotic for the dairyman. Its every-other-day dosing, subcutaneous injection and bactericidal activity against BRD and foot rot make EXCENEL a powerful antibiotic for feedlot or stocker hospital pens. Ask your P&U rep for details.

**EXCENEL™**  
Sterile Suspension

**Strong medicine for the hospital pen. A perfect fit for the dairy routine.**
