

TABLE OF CONTENTS

PLENARY SESSION

The Veterinary Practitioner, Our Essential Ally C. W. McMillian	6
Towards the Responsible Use of Veterinary Drugs Lester M. Crawford	12
Welcome to Oklahoma Lawrence L. Boger	16

GENERAL SESSION I

Ionophores, Buffers and Protein for Feedlot Cattle Fredrick N. Owens	18
---	----

GENERAL SESSION II

Embryo Transfer in a Group Practice Edwin G. Robertson	30
Veterinary Nutrition Service as Part of a Total Dairy Herd Health Program Arden J. Nelson	32
Fluid Therapy for the Bovine Patient Marc Mueller	42
Applied Fluid Therapy in Bovine Practice (practical-economical) David C. Bucholtz	45
A Livestock Producers Fair Harry James	51
Veal Calf Consultation Robert R. Blease	55
The Use of Microcomputers for Consultations Gene Leverett	57
An Innovative Dispensing Pharmacy Daryl G. Meyer	62

GENERAL SESSION IV

The Effects of Cold Exposure on Neonatal Calves David P. Olson	64
---	----

SHORT TOPICS

Productivity Studies with Ivermectin in Beef Cattle J. E. Holste	69
---	----

DAIRY SPLIT SESSION I

Developing Workable Calf Management Programs David Waltner—Toews	72
--	----

The Role of Colostrum in Managing Calf Health Clive C. Gay	79
Effects of Environment on Neonatal Dairy Calf Health Dale Hancock	85

FEEDLOT SPLIT SESSION I

Feedlot Disease Losses Dee Griffin	88
Implants and Feed Additives for Feedlot Cattle Donald R. Gill	93

COW-CALF/FEEDLOT SPLIT SESSION II

A Review of Bovine Respiratory Disease Robert A. Smith	102
Report on the North American Symposium on Bovine Respiratory Disease Joseph M. Cummins	122

COW-CALF/FEEDLOT SPLIT SESSION III

Stocker Calf Receiving Vaccination and Treatment Program Dee Griffin	127
Stocker Calf Receiving, Vaccination and Treatment Harry James	129
Ivermectin as an Antiparasitic Agent in Cattle William H. D. Learning	131

COW-CALF SPLIT SESSION I

Neonatal Calf Management Lawrence E. Rice	137
Physical Defects Which Limit Breeding Soundness of Bulls Robert S. Hudson, Dwight F. Wolfe	144
Cow-Calf Herd Health — An Idealistic Herd Health Program Duane Miksch	148
A Realistic Herd Health Program Herbert C. Clark Jr.	153

DAIRY SPLIT SESSION II

Bovine Reproductive Failure Associated with Ureaplasma Diversum Paul A. Doig, H. L. Ruhnke, R. B. Miller	155
---	-----

Bovine Leptospirosis and Infertility Lyle E. Hanson	159
Trichomoniasis: Diagnosis, Pathogenesis, Treatment and Control L. Ball, R. G. Mortimer, J. M. Cheny, J. D. Olson	163
Effects of Incidence and Degree of Endometrial Scarring on Fertility in Dairy Cattle J. E. Manspeaker, M. A. Haaland, M. G. Robl, G. H. Edwards	166

PRACTICE TIPS

Cows and Curves Elaine Painter	171
Bovine Practice in Hawaii David Mackay	172
Isoniazid Therapy in Bovine Practice Mark A. Schwarm	173
Teat Surgery—Stainless Steel Staples L. C. Allenstein	174
The Use of Tissue Adhesives in Teat Surgery Jorgen Gaymer	175
Don't Under-rate T.B. Testing Steve Smalley	176
Use of a Letter Opener for Uterine Incision During Caesarean Section Walter Guterbock	177
Use of Plastic Buttons for Repair of Vaginal Prolapse in the Cow Joe Dixon	180

Use of the DART Program in the Southeast as a Practice Option Howard Jones	181
--	-----

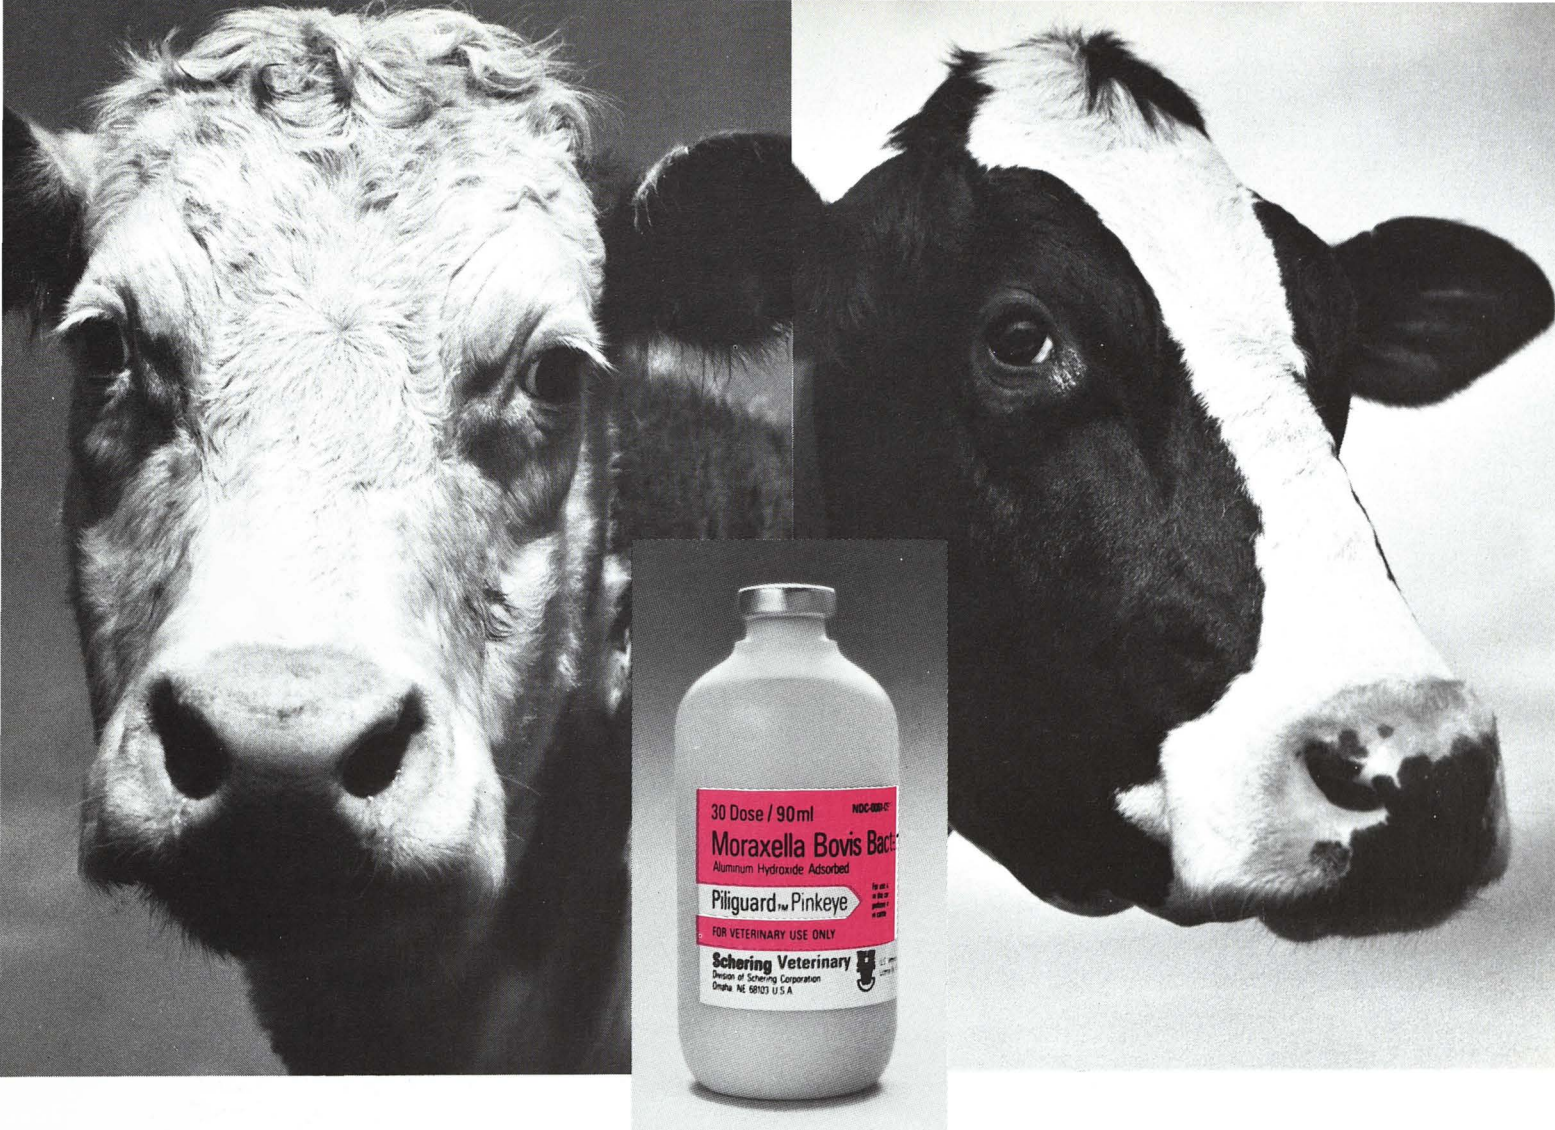

RESEARCH SUMMARIES

Use of Prostaglandin in Herd Health Programs Robert J. Harris	185
Trouble-Shooting Reproductive Problems Through Intergrated Reproductive Management L. J. Hutchinson, M. L. O'Connor, R. S. Adams, R. S. Baldwin	187
Factors Involved in Udder Edema Jerome G. E. Vestweber, Falah K. Al-Ani	189
Fescue Toxic Syndrome Update Duane Miksch	189
The Effect of Unilateral Orchiectomy on Semen Quality in Bulls Dwight F. Wolfe, Robert S. Hudson, Robert L. Carson, Ram C. Purohit	194
Effect of Feeding Microbial Cultures to Milk Fed Dairy Calves E. L. Bliss, R. K. Braun, R. C. Littel	195
Comparisons of Colostral and Serum Antibody Titres in Cows Vaccinated with <i>E. Coli</i> K99 Antigens G. A. Donovan, R. K. Braun, R. C. Littel	196
Infectious Bovine Keratoconjunctivitis: Comparison of Immunological Response and Disease Reproduction in Vaccinated and Non-Vaccinated Calves Robert M. Gwin, Renate M. Steffen, Dale E. Cunningham, Harold G. Jensen, Robert E. Worthquist	198

International Minerals & Chemical Corporation	179		

From now on, this could be the only pink you'll ever see in pinkeye.

The first pinkeye bacterin of its kind to be USDA-licensed is also the first to be piliated. And it comes from Schering.

In the battle to prevent pinkeye, there's now a major victory. It's PILIGUARD™ Pinkeye—the new technologically-advanced,* piliated vaccine made by Schering. And made available only to the veterinary profession.

As you well know, pinkeye is serious business. In fact, university studies estimate that pinkeye can reduce beef gains by up to one-half pound per day and depress milk production as much as 5%.

Preventing losses like these is a job for more than

fly and insect control. It's a job for PILIGUARD Pinkeye. In a severe laboratory challenge, PILIGUARD Pinkeye offered greater than 70% protection against *Moraxella bovis* as compared to laboratory controls. What's more, as produced by Schering's state-of-the-art technology, it's a *piliated vaccine*. And that means it offers better protection against bacterial attachment to the surface of the eye.

All you need for optimum immunization is two subcutaneous vaccinations—3-4 weeks apart. But make no mistake. The vaccine you need to do it is the only one that's USDA-licensed. PILIGUARD Pinkeye from Schering Corporation, Animal Health Division, Kenilworth, N.J. 07033.

Schering
