SECTION B: POPULATION MEDICINE (All Section B Sessions will be Translated)

4. Epidemiology

Martin, W.	1
Linking the Laboratory and the Farm: Integrating Epidemiology and Biotechnology	
Noordhuizen, J.P.; Frankena, K.; Stassen, E.N.	6
Applied Epidemiology In Aid To Dairy Herd Health Programs	
Hurd, H.S.; Hueston, W.	12
Macroepidemiology As It Affects Decision Making In Animal Health	
Dargatz, D.A.; Miller, W.C.	18
Integrated Resource Management Through Mathematical Optimization Techniques	
Van Ranst, B.; Baecke, F.; Mattheeuws, M.; Van Zeveren, A.; Bouquet, Y.	23
ARGOS: A Program for Veterinary and Zootechnical Herd Health Management	

5. Metabolic / Nutrition / Toxicology

Erskine, R.J.	30
Advances in Nutrition and Bovine Disease	
Tajima, M.; Yazawa, T.; Hagiwara, K.; Kurosawa, T.; Takahashi, K.	34
Diabetes Mellitus in Cattle Infected With Bovine Viral Diarrhea Mucosal Disease Virus	
Patton, R.; Dykes, M.; Munyakazi, L.; Cloninger, R.; Gerloff, B.; Gardner, C.; Simms, J.; Scott, J.	38
Effects of Sustained Release Somatotrope on Milk Production and Body Condition Repletion in Later Lactation: A Field Study	
Casteel, S.W.; Braun, W.F.; Wicklow, D.T.; Wallace, L.M.; Johnson, G.C.	44
Forage-Associated Mycotoxicosis	
Kelly, J.M.; Whitaker, D.A.; Smith, E.J.	51
The Changing Pattern of Health Problems Since the Introduction of Milk Quotas	
Mullenax, C.H.; Baumann, L.E.; McDowell, L.R.; Norman, B.B.	57
Secadera - A Nutritional Wasting Disease in Cattle Grazing Acidic, Sulfur-Deficient, Tropical Savannas	
Scott, P.R.; Sutton, D.	63
Some Factors Influencing the Prognosis of Some Common Bovine Neurological Diseases With Particular Reference to the Concentration of Penicillin G Reached in Cerebrospinal Fluid	

6. Theriogenology I

BonDurant, R.H.	69
Bovine Reproductive Health in the 21st Century	

Anderson, M.; Picanso, J.; Thurmond, M.; Blanchard, P.; Layton, B.; Palmer, C.; Case, J.; Barr, B.; Dubey, J.P.; Conrad, P.	74
Epidemiological Investigations of Bovine Protozoal Abortion in California Dairy Herds	
Gilbert, R.O.	79
Clinical Manifestations of Bovine Leukocyte Adhesion Deficiency: A Newly-Recognized, Inherited Disease of Holstein-Friesian Cattle	
Divers, T.J.; Bartholomew, R.; Sweeney, R.; Hogan, P.; Littel, C.; Ferrer, J.	84
Transmission of Bovine Leukemia Virus By Rectal Palpation - Control and Epidemiologic Studies	
Szenci, O.; Piros, A.; Kovács, L.	90
Accuracy of Repeated Pregnancy Diagnoses With a Battery-Operated Portable Ultrasonic Scanner in Dairy Cattle	
7. Mastitis	
Sears, P.; Blackburn, P.	95
Promising Avenues in Mastitis Control	
Sischo, W.M.; Rogers, G.W.	101
Epidemiology of Heifer Mastitis	
Sol, J.; Harink, J.; Schukken, Y.H.; Snoep, J.J.	105
Factors in Cure of Subclinical S. Aureus After Dry Cow Therapy	
DeGraves, F. J.	111
Economic Evaluation of Antibiotic Therapy During the Treatment of Acute Coliform Mastitis	
Bishop, J. R.; Whittier, W.D.; Duncan, S.E.; Jones, G.M.	117
Evaluation of Animal Drug Residue Detection Methods	
Daigneault, J.; Dubreuil, P.; Couture, Y.; Guay, P.; Boudreau, H.; Landry, D.	122
Penicillin Concentrations in Serum and Milk Following Administration of Procaine Penicillin G By Different Route at Different Dosage	
Hentschl, A.F.	128
The Dairy Practitioner and the American Veterinary Medical Association / National Milk Producers Federation Quality Assurance Program for Milk and Dairy Beef	
Belschner, A. P.	132
Residue Phobia, Residue Avoidance and the Real World	
Sears, P.M.; Wilson, D.J.; Gonzalez, R.N.; Blackburn, P.	138
The Potential Role of Antimicrobial Proteins in the Treatment of Bovine Mastitis	

GENERAL SESSIONS
(General Sessions Will Not Be Translated)

GENERAL SESSION I

“Reproductive Update”

Britt, J.H.	143
Influence of Nutrition and Weight Loss on Reproduction and Early Embryonic Death in Cattle	
Vickers, M.L.	149
Getting a Diagnosis in an Abortion Storm	

GENERAL SESSION II

“BVD: More Questions Than Answers”

Cortese, V.	152
BVD Vaccines – Is There an Answer	
Bolin, S.R.	155
BVD: What’s the Latest	
Vickers, M.L.	158
BVD: Getting a Positive Diagnosis	

GENERAL SESSION III

“New Approaches to Raising Healthy Calves”

McGuirk, S. M.	162
Colostrum: Quality and Quantity	
Fowler, M.	168
Recent Calf Milk Replacer Research Update	
Tomkins, T.; Drackley, J.K.	176
Clotting Factor in Bovine Preruminant Nutrition	
McGuirk, S.M.	182
New Approach to Electrolyte Therapy	

GENERAL SESSION IV

“The Financial Health of Your Practice”

Overby, A.A.	187
Charging by Procedure Makes Our Practice Profitable	
Johnson, P.E.	189
Getting Paid by the Hour Yields More Profits	
Ferry, J.W.	191
Contract Veterinary Services Are the Financial Answer	
Guichon, P.T.; Jim, G.K.	193
Getting Paid By The Head	
Johnson, A.P.	196
Commission System: The Practice Equalizer	
Gardner, C.E.	198
Collecting Accounts	

DAIRY SESSIONS

(All Dairy Sessions Will Be Translated)

DAIRY SESSION I

“Challenges Facing Everyone Associated With the Dairy Industry”

Cropp, R.A.; Jesse, E.V.	200
Economic Trends in Milk Pricing and Marketing	
Dahl, J.C.	206
Whither and How Food Animal Medicine Approaches the Millennium	

DAIRY SESSION II

“Education of Current and Future Dairy Practitioners”

Nordlund, K.; Oetzel, G.; Goodger, W.; Dahl, J.	212
Special Elective Rotations as a Means of Teaching Dairy Production Medicine Skills to Veterinary Students	
Leslie, K.	217
The Development of Continuing Education Opportunities For Veterinarians in Dairy Health Management	
Sterner, K.E.	222
Future Directions and Projections of Manpower Needs in Dairy Practice	
DeJong, G.A.	224
Application of Dairy Production Medicine in Practice	
Johnson, A.P.	227
Some of the Difficult Aspects of Getting Into Production Medicine	

DAIRY SESSION III

“Potpourri”

Sniffen, C.J.; Van Saun, R.J.	229
The Latest Thinking on Dry Cow Management	
Ferry, J.W.	235
Do We Need Postpartum Fertility Exams as Part of a Reproductive Herd Health Program	
Nickerson, S.C.	239
Novel Concepts of Mastitis Control	

COW / CALF SESSIONS

(All Cow / Calf Sessions Will Be Translated)

COW / CALF SESSION I

Corah, L.R.	244
Nutritional Factors Affecting Reproduction and Practical Nutrition For Beef Cattle Ranchers	

COW / CALF SESSION II

Corwin, R.M.	266
Effective Parasite Control For Cow-Calf Programs – An Update on Effective Anthelmintic Usage	
McGrann, J.M.	270
Standardized Performance Analysis Integrating Production and Financial Performance	

COW / CALF SESSION III

Toombs, R.E.	275
A Systematic Approach to Improve Productivity and Profitability of Beef Cattle Ranches	
Wikse, S.E.; Toombs, R.E.; Field, R.W.; Holland, P.S.	284
Epidemiologic Approach to Solving Beef Herd Production or Disease Problems	

Toombs, R.E.	294
Beef Cattle Management Consultation	

FEEDLOT SESSIONS
(Feedlot Sessions Will Not Be Translated)

FEEDLOT SESSION I

“Managing Cattle Entering the Feedlot”

Thomson, J.U.	304
Preconditioning and Integrating Pre-Purchase Information	

Cole, N.A.	309
Receiving Nutrition and Management for Feedlots	

Smith, R.A.	315
Making Rational Product Choices	

Griffin, D.; Perino, L.	320
Feedlot Hospital Management	

FEEDLOT SESSION II

“Managing the Feedlot Environment and Managing Feedlot Pharmaceuticals”

Bodman, G.R.	323
Feedlot Engineering & Design	

Sundlof, S.F.	331
Feedlot Residue Testing	

FEEDLOT SESSION III

“Managing by Fact: Generating and Interpreting Feedlot Information”

Glock, R.D.	337
Review of Feedlot Pathology	

Griffin, D.; Perino, L.	343
Disease Monitoring in Packing Houses	

Buiatrics is the study of cattle diseases and health management.

Stressed Livestock Often Need Quick Vitamin E Boost

The variability of vitamin E in feedstuffs requires routine evaluation of vitamin E activity in livestock diets through all phases of production.

Research by P.G. Reddy and associates at Kansas State University has shown that injectable vitamin E administration improved vitamin E status of calves from two to eight weeks of age, compared to oral dosing.¹

Kansas State University research has also documented an improvement in immune response measurements with the use of parenteral administration of tocopherol (vitamin E).²

Critical for health and performance

A nutrient that functions as an antioxidant in the body, vitamin E is essential for good livestock health and peak performance.

Adequate vitamin E is crucial for the optimal functioning of the nervous, reproductive, muscular, cardiovascular, pulmonary and immune systems.

Among other things, tocopherol deficiency may cause fetal death and resorption, liver necrosis, testicular degeneration, nutritional muscular dystrophy, hemolytic anemia, vascular degeneration and neural and myocardial degeneration.

Vitamin E and ruminants

In ruminants, the most widely recognized syndrome is nutritional myodegeneration (NMD) or "white muscle disease."

Factors influencing vitamin E requirements of ruminants include rumen microbial destruction, nitrate ingestion, high intake of dietary polyunsaturated fatty acids, excessively high dietary vitamin A and deficient intake of other antioxidants, such as carotenoids and vitamin C.

Utilization of forage preservatives such as propionic acid and sodium hydroxide further destroy alpha-tocopherol content and increase vitamin E requirements.

Vitamin E and Swine

Classical vitamin E deficiency lesions in swine include mulberry heart disease (MHD), hepatitis dietetica and NMD.

General signs of NMD in swine include sudden death, lameness and ataxia, reduced growth rate and feed intake and lower feed efficiency. Pigs with chronic liver damage may appear jaundiced and transudates appear frequently in the pleural cavity.

MHD, or microangiopathy, usually results in sudden death following destruction of heart muscle. Newborn and young growing pigs between three and eight weeks of age are generally affected.

Marginal deficiencies

Although clinical vitamin E deficiencies are well documented and apparent, subclinical problems caused by marginal deficiencies may be more economically important because they subtly affect livestock health and performance.

These subclinical deficiencies may lead to secondary reproductive problems, increased morbidity and mortality and overall reduction in performance.

When considering injectable vitamin E supplementation, it's important to note that there are major differences between natural vitamin E injectables and synthetic vitamin E injectables.

Natural E, for example, has more biological activity—expressed in international units (I.U.)—per ml than synthetic vitamin E.

Natural is more potent

Natural vitamin E can have a higher potency per ml than synthetics. The highest potency for synthetic products, for instance, is 250 I.U. per ml, while for natural vitamin E, the highest potency is 500 I.U. per ml.

Also, in natural injectables, the vitamin E activity is provided as

alpha-tocopherol, the biologically active form of vitamin E activity. Some synthetic products provide vitamin E as an acetate-ester, which is not as biologically available as the free tocopherol.

These studies also calculated that the conversion factor for d-alpha-tocopherol in cattle is much higher than generally recognized.

Schering-Plough Animal Health introduces new natural vitamin E products

Schering-Plough Animal Health has recently introduced a new line of natural and powerful vitamin E injectable products that give you the tools you need to help your clients when their livestock require a quick vitamin E boost.

New injectable Vital E™ is available in 300 and 500 I.U. concentrations and 300 I.U. concentration in combination with vitamins A and D. These new products are clear, sterile, non-aqueous solutions of d-alpha-tocopherol, for use as a supplemental source of natural vitamin E.

Contact your Schering-Plough Representative for more information on these new natural vitamin E products, or write to: Schering-Plough Animal Health, Dept. RY, P.O. Box 529, Kenilworth, NJ 07033.
