Theme: "The Veterinarian and Management of Today's Cattle Operation"

Opening Session

Dr. James Jarrett, Chairman

Robert J. Harris, Welcome	3
John Noordsy, Welcome to St. Louis	4
James Jarrett, The Program	7
Vernon Tharp, Greetings from the AVMA	7
John White, Report from the Department of Agriculture	10
Wray Finney, Problems and Opportunities in the Cattle Business	14
Louis Longo, Modern Management as a Road to Profit	20

General Session

Dr. John Noordsy, Chairman

Eric I. Williams, The Clinical Examination of the Bovine Animal	26
Leland C. Allenstein, Considerations in a Differential Diagnosis	32
Roger Panciera, Postmortem Examination	36
Clair M. Hibbs, Suggested Techniques and Clinical Pathology Information for the Veterinary Practitioner	40
Kent Van Kampen, Exotic Diagnostic Procedures	46

General Session

Dr. Robert Harris, Chairman

Ben Norman, Nutrition and Its Subsequent Effects on Diseases	51
Will T. Butts, Jr., Shipping Fever Research	54

Dairy Session

Dr. Byford Woods, Chairman

W. N. Philpot, Comparative Effectiveness of Different Dry Cow Treatment Systems	55
Daniel A. Gingerich, Pharmacokinetics of Drugs Used Systemically in Mastitis Therapy	64
Practitioners' Panel of Everyday Practice Problems	72
Mervyn Mahoney, Functional Type in the Dairy Cow and Its Economic Value to the Industry	86
A. E. Freeman, Genetic Differences in Health Problems and Calving Difficulty in Dairy Cattle	89
W. L. Kucker, The Importance of Type in an Effective Breeding Program	97
H. E. Amstutz, Care of the Foot of the Dairy Cow	101
T. E. Lucas, Levamisole as an Experimental Immunomodulating Agent	103
David M. Galton, Economical Evaluation of Reproductive Herd Health Programs	106
A. C. Todd, D. H. Bliss, J. W. Crowley, Jr., and L. Grisi, Economic Impact of Parasitism in Dairy Herds	109
Charles D. Gibson, Abortion in Dairy Cattle Placed in Proper Perspective	111
Panel Discussion	114
Bruce L. Hull, On-Farm Techniques for Repair of Bovine Fractures	116
Glen F. Hoffsis, Saving the Valuable Calf	119
D. Michael Rings, Use of the Laboratory in Diagnosis & Therapy	126

Cow-Calf Session

Dr. Russ Benson, Chairman

Wray Finney, Producer-Veterinarian Relationship	132
L. C. Vanderwagen, John Sharp, and Margaret E. Meyer, A Retrospective Study on the Relationships of Calving Practices and Vaccination Status of Reactor Animals to the Cost of Eradicating Brucellosis in 79 Dairy Herds	134
George Crenshaw, Ralgro-Non-hormonal Growth Stimulant on Pastured Calves	138
Ned Brown, Anthrax-Epidemiology of an Outbreak	140
Panel Discussion	145
Paul Nicoletti, Brucellosis-Adult Vaccination Program Research	147
Paul Winsor, Anaplasmosis-When to Vaccinate?	151
Cyril Brown, Suturing the Nictitating Membrane for Treatment of Pinkeye in the Bovine	153
Jack Riley, Rumensin for Use on Grass and for Lighter Weight Calves	155
Panel Discussion	158

Feedlot Session

Dr. David Bechtol, Chairman

Leo Vermedahl, Feedlot Dollars and Cents	162
Max Garrison, The Value of Simplified Records	170
David Bechtol, Personnel Management in a Large Feedlot	175
Jan P. Schuiteman and Roger Rappert, Personnel Management in a Small Midwest Feedlot	178
Panel Discussion	182
Rodney Oliphant, Drug-Related Problems and Solutions in a Large Feedlot	187
W. E. Brandt, Problems and Solutions During the Growth of the Family-Farm Feedlot of 200 Head to a Unit of 2,000 Head	190
Panel Discussion	192
Practice Methods	195

The difference you can see is just the beginning

Haver-Lockhart's patented adjuvant Havlogen[®], unlike previous adjuvants, assures uniform quality in Haver-Lockhart biological products. From near freezing temperatures to reasonably high temperatures, there is no separation. Syringability is maintained at near-freezing temperatures in Havlogen adjuvanted biologicals. *But that's just the beginning.*

Potentiates Antigenic Response

Havlogen adjuvant in Haver-Lockhart biologicals stimulates added disease protection needed during stress periods. On antigens tested in controlled studies, Havlogen induced greater antigenic response than aluminum hydroxide.

Prolongs Duration of Immunity

Because Havlogen adjuvanted bacterins and toxoids induce a higher antibody response, they also lengthen the period of immunity. And Havlogen also stimulates rapid immune response, as well.

Helps Minimize Reaction

Haver-Lockhart biologicals with Havlogen are not concentrated, which helps minimize reaction at the injection site when administered intramuscularly.

Havlogen[®] Adjuvant . . .

Clearly makes the
difference in cattle
biologicals.
