DISCOVER AN EXTRA CALF IN EVERY BOTTLE

Vaccinating with Vision® 7 results in 14 pounds more weaning weight per calf than Ultrabac® 7 — Your clients get an extra calf in every 50-dose bottle.

Blackleg vaccination stress can decrease performance, but Vision® minimizes the negative impact of vaccination.

The proof is in the pounds. Studies show:

- Less stress in calves vaccinated with Vision 2mL compared to 5mL blackleg vaccines results in a weaning weight advantage from 9 to 18 pounds
- Vision 7 2mL resulted in a 14-pound weaning weight advantage when compared to Ultrabac 7 5mL* — that's an extra calf in every 50-dose bottle

Help your clients take the stress out of blackleg protection. Switch your recommendation to Vision vaccine today.
