Protection at the point of infection

The breakthrough respiratory protection of Onset™ IN provides protection at the point of infection. Administered intranasally, the innovative mode of action and proprietary BluShadow® diluent help Onset IN cling to nasal mucosal tissues for an immune response that more closely mirrors the natural route of respiratory infection. As a 2mL dose in a single nostril or 1mL in each nostril, Onset IN has been proven safe and efficacious in newborn calves as young as three days of age.

Modified live virus protection against diseases caused by:

- Infectious Bovine Rhinotracheitis (IBR)
- Bovine Viral Diarrhea (BVD) Type 1 and Type 2
- Parainfluenza₃ (PI₃)
- Bovine Respiratory Syncytial Virus (BRSV)

Talk to your Intervet/Schering-Plough Animal Health sales representative or your animal health supplier to experience the breakthrough respiratory protection of Onset 5 IN and Onset 5 PMH IN (*coming soon*), available in 1, 10 and 50 dose sizes.

DO NOT USE IN HIGH STRESS STOCKER CATTLE OR HIGH RISK CATTLE .

THE BOVINE PRACTITIONER is the official publication of The American Association of Bovine Practitioners, published in the spring and summer annually. It also serves as a communication medium between bovine practitioner organizations around the world. All manuscripts and communications must be presented in English.

Copies of THE BOVINE PRACTITIONER are available to non-members for \$25.00 per copy for domestic destinations, or \$33.00 for international addresses. **Contact editor for details.**

The Bovine PRACTITIONER

Guidelines for Authors

Two issues of *The Bovine Practitioner* are published annually, one in the spring and one in the summer. It also serves as a communication medium between bovine practitioner organizations around the world. All manuscripts and communications must be presented in English.

Most articles in the journal are peer-reviewed or refereed. Papers submitted for publication in the peer-reviewed section are anonymously reviewed by three members of the editorial board. In some cases, papers may be reviewed by an outside expert(s) who is not a regular member of the editorial board. Papers published in the peer-reviewed section of the journal will be identified with a "Peer-Reviewed" banner at the top of the first page. Papers rejected by the editorial board for publication as peer-reviewed articles do not automatically qualify for publication in the non-peer-reviewed sections.

Articles published in *The Bovine Practitioner* are intended to address the needs of bovine practitioners. Types of articles considered appropriate for the journal include research reports, case reports, review articles, retrospective studies and articles describing new techniques.

All papers should begin with an abstract. Research reports should follow with an introduction, materials and methods (including experimental design and statistical analysis), results, discussion and conclusions. At the author's discretion, results and discussion may be combined.

Case reports should be written to include an introduction, history, clinical findings, appropriate laboratory data, surgical/therapeutic management, discussion and conclusions.

Review articles covering topics important to the practitioner are welcome. They should address more recent advances and bring the reader cutting edge information related to bovine practice or to beef or dairy production.

Papers reporting retrospective studies should include an introduction, clinical implications or objectives of the study, the methodology used to evaluate the data, a section that details the significance of the findings to the practitioner and conclusions.

Two manuscripts and a CD or jump drive should be submitted to the editor through the mail or via a parcel delivery service. Manuscripts should be double-spaced, using 12-point Times type and 1-inch margins. Both lines and pages should be numbered. When possible Microsoft Word should be used.

Figures, tables and photographs are welcome. Figures should be numbered on the back; legends for figures should be submitted on a separate sheet of paper. Photographs can be submitted as digital images or prints; prints are preferred over 2x2 slides.

English units of measure should be used for weights, measures and temperature. If the author desires, it is acceptable to follow English units with metric units in parenthesis, i.e....440 lb (200 kg) steer had a rectal temperature of 101.5°F (38.6°C). When the use of brand names is necessary, they should be listed in footnotes or endnotes, including the name of product, manufacturer, and manufacturer's city and state.

References to literature cited in the paper must be identified in the text by the use of superscripts. References should be listed in **alphabetical order**. Suggested style for citations in the reference section is as follows:

1. Allen WM, Sansom BF: Parturient paresis (milk fever) and hypocalcemia (cows, ewes, and goats), in Howard JL (ed): *Current Veterinary Therapy III. Food Animal Practice*. Philadelphia, WB Saunders Co, 1993, pp 304-308.
2. Barth AD, Cates WF, Harland RJ: The effect of body fat and loss of fat on breeding soundness classification of beef bulls. *Can Vet J* 36:758-764, 1995.
3. Nutrient Requirements of Beef Cattle, ed 7. Washington DC, National Academy Press, 1996.
4. Syvrud R: Vaccination for bovine respiratory syncytial virus: Benefits for both cow/calf and feedlot cattle. *Proc Am Assoc Bov Prac* 21:204-206, 1989.

All correspondence and manuscripts should be addressed to:

A colostrum replacer from the brand you trust

When Mother Nature needs a hand, count on Colostrx® 130 Colostrum Replacer. It contains the highest level of globulin proteins available anywhere — **130 grams!**

When colostrum supplies are limited or of low-quality, or when you want to break a cycle of maternally transmitted disease, turn to Colostrx 130 Colostrum Replacer.

- Consistently high levels of globulin protein derived from the same source that enriches natural colostrum
- Just a single, two-quart feeding
- Easier to mix than dried colostrum products
- Individual-dose packets make feeding simple and convenient

Your calves' futures depend on the globulin proteins they receive during the first 24 hours of life. Give them a hand by feeding Colostrx 130 as directed, and get them off to a good start.

Treated with Irradiation for your herd's protection
