Open cows and abortions are an expensive waste of your bull's time!

**Vira Shield 5+VL5, the 11-way shot that counts.** As a cautious manager, you probably already vaccinate for Vibrio, Lepto, IBR, BVD, PI3, and BRSV, but are you using the safest and most complete product available? Unlike our competitors, Vira Shield 5+VL5 is totally killed and does not have the potential to cause disease like modified live vaccines. Vira Shield 5+VL5 contains Xtend III® and requires only one 5 ml dose with a booster of Vira Shield 5. Vira Shield 5+VL5 is the only 11-way prebreeding vaccine containing field strains from actual disease outbreaks. The entire Vira Shield line contains Type 1 and the new, devastating Type 2 BVD which is now causing abortions and weak calves all across the nation. All other BVD vaccines on the market contain only Type 1 BVD.

**Vira Shield 5+VL5... the ONLY 5ml shot containing 11-way protection!**

Call today for your guide to preventing open cows and abortions 1-800-843-3386

Recommending a modified-live vaccine doesn’t have to make you sweat.

When you recommend a modified-live vaccine, post-vaccination temperature rise and a drop in performance are the last things you want to see. So choose BRSV Vac® combination IBR vaccines from Bayer and don’t sweat it.

Independent studies have shown there is no IBR shedding with the BRSV Vac line of vaccines. Yet it is fast acting and highly effective. Immune response to IBR begins as early as 48 hours following vaccination to help protect cattle during the critical days after weaning or arrival at the feedyard. And the unique production processes used in making BRSV Vac ensure serial-to-serial consistency for full protection against IBR, BVD, PI3, BRSV and five serotypes of lepto.

Stop worrying about giving your clients’ calves the sweats. Recommend BRSV Vac Vaccines from Bayer. For more information, contact your Bayer Sales Representative or Customer Service at 1-800-633-3796.

1 Bayer Field Trial Report 93-13. CMI/Humoral Response.
The Bovine Practitioner is the official publication of The American Association of Bovine Practitioners, published in January and May annually. It also serves as a communication medium between bovine practitioner organizations around the world. All manuscripts and communications must be presented in English.

A section of the journal is peer-reviewed or refereed. Papers submitted for publication in the peer-reviewed section are anonymously reviewed by three members of the editorial board. In some cases, papers may be reviewed by an outside expert(s) who is not a regular member of the editorial board. Papers published in the peer-reviewed section of the journal will be identified with a “Peer-Reviewed” banner at the top of the first page. Papers rejected by the editorial board for publication as peer-reviewed articles do not automatically qualify for publication in the non-peer-reviewed sections.

Articles published in the Bovine Practitioner are intended to address the needs of bovine practitioners. Types of articles considered appropriate for the journal include research reports, case reports, review articles, retrospective studies and articles describing new techniques.

All papers should begin with a summary or abstract. Research reports should follow with an introduction, methods and materials (including experimental design and statistical analysis), results, discussion and conclusions. At the author’s discretion, results and discussion may be combined.

Case reports should be written to include an introduction, history, clinical findings, appropriate laboratory data, surgical/therapeutic management, discussion and conclusions.

Review articles covering topics important to the practitioner are welcome. They should address more recent advances and bring the reader cutting edge information related to bovine practice or to beef or dairy production.

Papers reporting retrospective studies should include an introduction, clinical implications or objectives of the study, the methodology used to evaluate the data, a section that details the significance of the findings to the practitioner and conclusions.

Two manuscripts and a diskette should be submitted to the editor through the mail or via a parcel delivery service. Manuscripts should be double-spaced, using 12-point Times type and 1-inch margins. When possible, Microsoft Word should be used.

Figures, tables and photographs are welcome. Figures should be numbered on the back: legends for figures should be submitted on a separate sheet of paper. When photographs are submitted, prints are preferred over 2x2 slides.

English units of measure should be used for weights, measures and temperature. If the author desires, it is acceptable to follow English units with metric units in parenthesis, i.e.,...440 pound (200kg) steer had a rectal temperature of 101.5°F (38.6°C). When the use of brand names is necessary, they should be listed in footnotes.

References to literature cited in the paper should be identified in the text by the use of superscripts. References should be listed in alphabetical order. Suggested style for citations in the reference section is as follows:

All correspondence and manuscripts should be addressed to:

# Table of Contents

## General Session
- Significance and Sources of Antimicrobial-Resistant Nontyphoidal Salmonella Infections in Humans in the United States: the Need for Prudent Use of Antimicrobial Agents, Including Restricted Use of Fluoroquinolones, in Food Animals—Frederick J. Angulo, Robert V. Tauxe, Mitchell L. Cohen .................................................. 1
- Does Antimicrobial Use in Animals Affect Human Health?—Mike Ailey ................................................................. 9
- Improving Productivity: Make something happen!—Charles E. Gardner 13
- Adding Value and Getting Paid for It—Kelly F. Lechtenberg 17
- Personnel Management: Making it Work in Practice—John C. Simms .. 22
- Information on Regulation of Reproductive Cyclicity in Cattle—Milo C. Wittbank ........................................................................ 26
- Practical Manipulation of the Estrous Cycle in Dairy Animals—William W. Thatcher, Carlos A. Risco, Frederico Magrara ........... 34
- Practical Manipulation of the Estrous Cycle in Beef Cattle—Michael L. Day ................................................................................. 51
- Rangeland Cattle and the Risk of Waterborne Cryptosporidium parvum Infection in Humans—Rob Atwill ............................... 62
- Characterization of Antibiotic Resistance Among Veterinary Bacterial Pathogens—David G. White .............................................. 67
- Putting NC-BQA to Work Through the Quality Assurance, Critical Management Points (QACMP) System—Dee Griffin ............. 78
- Surgical Restoration Of Breeding Bulls—David E Anderson .... 79
- Breeding Soundness Examination of the Cow—Grant S. Frazer .... 82
- Surgical Management of the Inferior Cow—David E. Anderson .. 87
- Clinical Management of Pregnancy Complications in the Cow— 89
- Dystocia - a Review of Fetalometry in the Cow—Grant S. Frazer .. 97
- Surgical Management and Decision in Problem Birthing—David E. Anderson ................................................................. 101

## Beef Session
- Risk Factors Associated With Fatal Fibrinous Pneumonia (Shipping Fever) in Feedlot Calves—Carl S. Ribble, Alan H. Meek, Mohamed M. Shoukri, P. Tim Guichon, G. Kee-Jim ............................................ 104
- Effective Immunization of Cattle—R.D. Schultz ........................................ 110
- Immunomodulators Used in Cattle—R. D. Schultz ............................ 113
- How to Keep Both the Consultant and the Local Veterinarian Involved—Part 1—Delbert G. Miles .............................................................. 114
- How to Keep Both the Consultant and the Local Veterinarian Involved—Part 2—Doug Schwenka ......................................................... 115
- Bovine Practitioners' Role—Information Transfer—Carcass to Conception—Tom Noffsinger .......................................................... 117
- Vaccines I Would Not Use in My Cattle—R.D. Schultz ................. 119
- Disease Outbreak Investigation in the Beef Herd: Defining the Problem—Carl S. Ribble, Eugene D. Janzen, John Campbell ........... 121
- Opportunities for Cow-calf Practice: Interpreting the NAHMS Cow-calf Report—David A. Dargatz .................................................. 128
- Johne's Control in Cow-Calf Operations—Mike Collins .................. 131

## Dairy Session
- Field Measurement of Milking Vacuum Using Flow Simulation—Steven Stewart ................................................................. 134
- Cow Flow Through the Dairy: Culling Decisions—Terry W. Lehenbauer ................................................................. 141
- Practical Computerized Monitoring of Parlor Cow Flow—Steven C. Stewart, Steven W. Eicker ......................................................... 148
- Factors to Consider in Environment and Postpartum in the Dairy Cow With Special Emphasis on Milk Fever—J. P. Goff and R. L. Horst ................. 154
- The Many Causes of Down Cows—V.S. Cox, J.S. Onapito ............. 164
- Prevention and Treatment of Down Cows: a Continuum—V.S. Cox, R.J. Farmsworth ................................................................. 167

## Research Summaries Dairy 1 & 2
- Predictive Values of Early Pregnancy Diagnosis by Ultrasonography in Dairy Cattle—Virginia Filateau, Luc DesCôteaux .................. 170
- Does it Pay to Use an Ultrasound Machine for Early Pregnancy Diagnosis in Dairy Cows?—Luc DesCôteaux, John Petrow .......... 172
- Comparison of Two Estrus Synchronization Programs in a Large, Confinement-Housed Dairy Herd—Jenks Swann Britt, Jerome Gaska ................................................................. 175
- Comparison of human chorionic gonadotropin (HCG) and gonadotropin releasing hormone (GnRH) using a synchronized ovulation program for timed breeding—G Goodell, T Geary, and R Stevens .................................................. 180
- The Effect of Lameness on Milk Production in Dairy Cattle—L D. Warnick, C. L. Guard, and Y. T. Grönhn .......................................... 182
- A Prospective Randomized Field Study to Determine the Efficacy of a Serpens spp Vaccine Combined with Topical Treatment with Lincomycin HCl—Terry W. Lehenbauer, Sandra J. Rodgers, R. Gayman Selman, Jeremiah T. Saliki .................................................. 225
- Economic Decision Analysis of Control Strategies for Apalasmosis in Beef Herds—Terry W. Lehenbauer .................................................. 226
- Prevalence of Intramammary Infections in Beef Heifers at Parturition—J. R. Roberson and T. Bailey .................................................. 227
- Antibody Responses of Young Calves to Inactivated Viral Vaccines—Merline Kaebeler, Ronald Sealock, Mark Honeymam ... 229

## Research Summaries Beef & General 1 & 2
- Synovial Fluid Analysis in Cattle: 52 Cases—Carsten Rohde, David E. Anderson, Andre Desrochers, Guy St-Jean, Bruce L. Hall .................................................. 220
- Evaluation of Specific Gravity as a Screening Test for Colostrum—Phillip W. Jardoen, Jon Robison, Jacqueline Myake .......... 224
- Methods of Evaluating Ruminal pH in Dairy Cattle—Garrett R. Oetzel, Lance Val .................................................. 233
- Distribution Characteristics and Sampling Strategy Considerations for Plasma Non-Esterified Fatty Acid (NEFA) Testing in Late-Gestation Dairy Cows—Thomas H. Herdt, Paul C. Bartlett .................................................. 240
- A Cross-Sectional Study of the Relationship Between Abomasal Displacement or Volvulus and Hypoaesthesia in Dairy Cattle—R. Douglas-Lecaroz, L D Warnick, C L Guard, M C Smith, and D A Barry .................................................. 246
- Effect of Nutrition, Lactation and Periparturient Complications on Adrenal, Pituitary and Ovarian Function and Uterine Involvement in High-Producing Dairy Cows—T Nakao, EB Torres M Moriyoshi, K Nakada, T Osawa, T Ohtaki, K Kawai .................................................. 246
- Eliminating Staphylococcus aureus Intramammary Infections Using Immune Enhancement and Antibiotic Therapy—Philip M. Sears, Austin P. Belschner .................................................. 248
- Evaluation of 9 Treatments, Including No Treatment, for Efficacy Against 21 Different Bovine Mastitis Pathogens—David J. Wilson, Linda L. Garrison, Kerry L. Case, Ruben N. Gonzalez ................................. 213
- Impact of Prototheca Mastitis on Bulk Tank Somatic Cell Count and Standard Plate Count—Bren N. Guzick, Gary A. Bennett, Sharon A. Sickles, Debra St. Hilaire, Daryl V. Nydam .................................................. 216

The complete document contains additional research summaries not listed here.
• Enteric Immunization Induces Active Maculop and Systemic Immunity in Neonatal Ruminants—G. Mutwiri, Z. Papp and P. Griebel .................................................. 233
